
Project Abstract: Interview.io

Project Overview

Interview.io is a unified, AI-driven career development platform designed to streamline the journey from job application to offer letter. Developed to address the fragmented nature of interview preparation, the platform provides a centralized "Command Center" where candidates can practice mock interviews, analyze resumes, and track their progress through data-backed insights.

Core Innovation & Features

The platform's standout feature is the **Voice-Enabled AI Mock Interviewer**, which moves beyond text-based bots to conduct real-time, verbal technical screenings. Key modules include:

- **GitHub Repository Analysis:** Automatically scans a user's code to generate tailored questions, ensuring they can defend their technical decisions.
- **CodeX Sandbox:** An intelligent coding environment that provides visual complexity breakdowns (Time/Space) against optimal benchmarks.
- **AI Study Companion:** A document-processing tool that converts PDFs into audio overviews and instant summaries for on-the-go learning.
- **Resume Analyzer:** Provides an ATS-compatible score and identifies skill gaps based on the target role.
- Got it, Amol. We'll pivot the focus to show that the current architecture is optimized for **zero-cost sustainability** while remaining scalable. This is actually a great selling point for an MVP—showing you can build a high-complexity tool without a massive burn rate.
- Here is the updated abstract section:

Estimated Project Cost

- The architecture of **Interview.io** is engineered for maximum efficiency, leveraging "Always Free" tiers and community-supported open-source models. Currently, the entire platform operates at **zero operational cost**, demonstrating a sustainable and highly optimized deployment strategy:

Category	Infrastructure Used	Monthly Cost
Hosting & Frontend	Vercel (Hobby Tier)	\$0 (Free)

Backend & Services	Render (Free Tier)	\$0 (Free)
Database	MongoDB Atlas (Shared Cluster)	\$0 (Free)
Execution Engine	Oracle Cloud (Always Free Instance)	\$0 (Free)
AI & Voice Intelligence	OpenRouter (Free Models) & Web Speech API	\$0 (Free)
Total Monthly Burn		\$0
